SQL Practice

**Table:**

##6--Show first name and last name concatenated into one column to show their full name.

Code:
```
Select
    concat(first_name," ", last_name) as full_name
From
    patients
```

##7--Show first name, last name, and the full province name of each patient.

Code:
```
Select
    first_name, last_name, province_name
From
    patients
Join
    province_names
on
    province_names.province_id = patients.province_id;
```

##8--Show how many patients have a birth_date with 2010 as the birth year.

Code:
```
Select
    count(*)
From
    patients
Where
    year(birth_date) = 2010;
```

#9--Show the first_name, last_name, and height of the patient with the greatest height.

Code:
```
Select
    first_name, last_name, max(height)
From
    patients;
```

#10--Show all columns for patients who have one of the following patient_ids: 1,45,534,879,100.

Code:
```
Select *
  From
      patients
  Where
      patient_id in (1,45,534,879,1000);
```
